Geography Policy
Geography Policy

1 Aims and objectives

1.1 Geography teaches an understanding of places and environments. Through their work in geography, children learn about their local area, and they compare their life in this area with that in other regions in the United Kingdom and in the rest of the world. They learn how to draw and interpret maps, and they develop the skills of research, investigation, analysis and problem-solving. Through their growing knowledge and understanding of human geography, children gain an appreciation of life in other cultures. Geography teaching also motivates children to find out about the physical world, and enables them to recognise the importance of sustainable development for the future of mankind.

1.2 The objectives of teaching geography in our school are:

- to enable children to gain knowledge and understanding of places in the world;
- to increase children's knowledge of other cultures and, in so doing, teach a respect and understanding of what it means to be a positive citizen in a multi-cultural country;
- to allow children to learn graphic skills, including how to use, draw and interpret maps;
- to enable children to know and understand environmental problems at a local, regional and global level;
- to encourage in children a commitment to sustainable development, and an appreciation of what 'global citizenship' means;
- to develop in children a variety of other skills, including those of enquiry, problem-solving, ICT, investigation, and that of presenting their conclusions in the most appropriate way.

2 Teaching and Learning Style

2.1 We use a variety of teaching and learning styles in our geography lessons. We believe in whole-class teaching methods, and we combine these with enquiry-based research activities. We encourage children to ask as well as answer geographical questions. We offer them the opportunity to use a variety of data, such as maps, statistics, graphs, pictures, and aerial photographs, and we enable them to use ICT in geography lessons where this serves to enhance their learning. Children take part in role-play and discussions, and they present reports to the rest of the class. They engage in a wide variety of problem-solving activities. Wherever possible, we involve the children in 'real' geographical activities, for example research of a local environmental problem, or use of the Internet to investigate a current issue.
2.2 We recognise the fact that there are children of widely different geographical abilities in all classes, and we provide suitable learning opportunities for all children by matching the challenge of the task to the ability of the child. We achieve this by:

- setting tasks which are open-ended and can have a variety of responses;
- setting tasks of increasing difficulty, some children not completing all tasks;
- grouping children by ability in the room, and setting different tasks to each ability group;
- providing resources of different complexity, according to the ability of the child;
- using Teaching Assistants to support the work of individual children or groups of children.

3 Geography Curriculum Planning

3.1 Geography is taught as an integral part of our Thematic Curriculum. This themed approach maximises the inter-relationship between the foundation subjects and enriches the context and learning experiences offered to the children. The schemes are cross-referenced with the national scheme of work in geography, ensuring the development and progression of geographical skills and concepts for children of all abilities. The progression planned into the scheme of work, ensures the children are increasingly challenged as they move through the school.

3.2 We carefully selected the themes as a basis for our long-term plans and regularly review the themes to ensure the most effective learning and teaching experiences for our children. The subject leader tracks and monitors the schemes of work to ensure we are fulfilling the requirements of the National Curriculum 2014. By so doing, we ensure that children have complete coverage of the National Curriculum, but do not have to repeat topics.

3.3 We plan the topics so that the children build on prior learning. Children of all abilities have the opportunity to develop their skills and knowledge in each unit and, through planned progression built into the scheme of work, we offer them an increasing challenge as they move up the school.

4 The EYFS Stage

4.1 We teach geography in the EYFS as an integral part of the work covered during the year. As the Reception Class is part of the Early Years Foundation Stage of the National Curriculum, we relate the geographical aspects of the children’s work to the objectives set out in the Early Learning Goals (ELGs) which underpin the curriculum planning for children aged three to five. Geography makes a significant contribution to the development of each child’s knowledge and understanding of the world, through activities such as collecting postcards from different places, singing songs from around the world, or investigating what makes a ‘good’ playground.
The Contribution of Geography to Teaching in other Curriculum Areas

5.1 **English**

Geography makes a significant contribution to the teaching of English in our school because it actively promotes the skills of reading, writing, speaking and listening. We ensure that some of the texts that we use during literacy are geographical in nature. For example, in Key Stage 1 we use some of the traditional stories to develop children’s knowledge and understanding of maps and routes, such as Little Red Riding Hood, when children create a map and route from Red Riding Hood’s home to her grandmother’s cottage through the forest. At Key Stage 2 we organise debates on environmental issues, because we believe that these develop speaking and listening skills. Reports, letters and recording information will all develop children’s writing ability. We also use environmental issues as a way of developing the children’s writing ability, by asking them to record information and write reports and letters.

5.2 **Mathematics**

The teaching of geography in our school contributes to children’s mathematical understanding in a variety of ways. We teach the children how to represent objects with maps. The children study space, scale and distance, and they learn how to use four- and six-figure grid references. They also use graphs to explore, analyse and illustrate a variety of data.

5.3 **Personal, social and health education (PSHE) and citizenship**

Geography contributes significantly to the teaching of personal, social and health education and citizenship. Firstly, the subject matter lends itself to raising matters of citizenship and social welfare. For example, children study the way people recycle material, and how environments are changed for better or for worse. Secondly, the nature of the subject means that children have the opportunity to take part in debates and discussions. We allow them to organise campaigns on matters of concern to them, such as helping the poor or homeless. Thus, geography in our school promotes the concept of positive citizenship.

5.4 **Spiritual, moral, social and cultural development**

We offer children in our school many opportunities to examine the fundamental questions in life through the medium of geography. For example, their work on the changing landscape and environmental issues leads children to ask questions about the evolution of the planet. We encourage the children to reflect on the impact of mankind on our world, and we introduce the concept of ‘stewardship’ in relation to sustainable development. Through teaching about contrasting localities, we enable the children to learn about inequality and injustice in the world. We help children to develop their knowledge and understanding of different cultures, so that they learn to avoid stereotyping other people, and acquire a positive attitude towards others. We help
contribute to the children’s social development by teaching them about how society works to resolve difficult issues of economic development. Geography contributes to the children’s appreciation of what is right and wrong by raising many moral questions during the programme of study.

6 **Geography and ICT**

6.1 Information and communication technology enhances our teaching of geography, wherever appropriate, in each key stage. This more than meets the statutory requirement for children to use ICT as part of their geography work in Key Stage 2. Children use ICT to enhance their skills in data handling (mountain, climate, population or river data) and in presenting written work. They research information through the Internet, and use libraries of digital images (aerial photographs, for example).

7 **Geography and Inclusion**

7.1 At our school we teach geography to all children, whatever their ability and individual needs. Geography implements the school curriculum policy of providing a broad and balanced education to all children. Through our geography teaching we provide learning opportunities that match the needs of children with learning difficulties, and we take into account the targets set for individual children. We strive hard to meet the needs of those pupils with special educational needs, those with disabilities, those with special gifts and talents, and those learning English as an additional language, and we take all reasonable steps to achieve this.

7.2 When progress falls significantly outside the expected range, the child may have special educational needs. Our assessment process looks at a range of factors – classroom organisation, teaching materials, teaching style, and differentiation – so that we can take some additional or different action to enable the child to learn more effectively. Assessment against the National Curriculum allows us to consider each child’s attainment and progress against expected levels. This helps ensure that our teaching is matched to the child’s needs.

7.3 We enable all pupils to have access to the full range of activities involved in learning geography. Where children are to participate in activities outside the classroom, such as a visit to a river, we carry out a risk assessment prior to the activity, to ensure that the activity is safe and appropriate for all pupils.

8 **Assessment for Learning**

8.1 Children demonstrate their ability in geography in a variety of different ways. Younger children might, for example, dress up in costumes from different parts of the world, whilst older pupils might produce a PowerPoint presentation based on their investigations of different sources of energy. Teachers will assess children’s work by making informal judgements during lessons. On completion of a piece of work, the teacher assesses the work and uses this information to plan future learning. Written or
verbal feedback is given to the child to help guide his or her progress. Older children are encouraged to make judgements about how they can improve their own work.

8.2 At the end of a scheme of work we track children’s progress in relation to National Curriculum expectations. We use this information as a basis for monitoring the progress of the child, and for writing the annual reports given to parents, at the end of each academic year.

9 Resources

9.1 There are sufficient resources for all geography teaching units in the school, but the resources are reviewed and added to when needed. Priority is currently being given to the new topics being taught as a result of the re-structuring and thematic approach to the teaching of geography. These resources are located in the relevant Key Stage departments, where there are boxes of equipment for each unit of work. The library contains a good supply of topic books and there is software to support children’s individual research.

10 Fieldwork

10.1 Fieldwork is integral to good geography teaching, and we include as many opportunities as we can to involve children in practical geographical research and enquiry.

10.2 At Key Stage 1 we let all the children carry out an investigation into the local environment, and we give them opportunities to observe and record information around the school site. At Key Stage 2 the children do a study of the local area. We also offer them the opportunity to take part in a residential visits to Plas Dol-y-Moch in North Wales, Skern and Kingswood.

11 Monitoring and Review

11.1 The Subject Leader is responsible for monitoring the standard of the children’s work and the quality of teaching in geography. The Subject Leader is also responsible for supporting colleagues in their teaching, for being informed about current developments in the subject, and for providing a strategic lead and direction for geography in the school. The Subject Leader evaluates progress against School Development Plan priorities as part of the Subject Action Plan and may be asked to present to the Local Governing Body as part of the monitoring process.

11.2 This policy will be reviewed at least every three years.
Date of approval: Autumn Term 2 2017
